

Technical Description (up to 20 points for draft + up to 20 points for final)

Assignment Goal: Using the provided *influenza vaccine document*, create a technical description that is helpful for a likely consumer. Your technical description should demonstrate principles of technical communication and document design, including two appropriately captioned graphics.

Instructions

Prepare a one-page technical description (**minimum of 300 words**) in which you describe the influenza vaccine to your target audience. You may use PowerPoint, MS Word, or Canva to design your technical description. In conjunction with this, complete an Audience & Use Profile form.

Here are the steps you should follow:

1. Skim the existing influenza vaccine document.
2. Fill out the **Audience & Use Profile** form. This form helps you determine the audience you will target for your technical description.
Ask yourself these questions: Who wants/needs to know about this? Which of the information on the existing document does the audience need/want?
3. Decide which information you are going to use from the existing document.
4. Write the text and design the layout of the document. Be sure to do the following:
Make sure your design demonstrates principles of technical communication and document design.
 - Include two appropriately captioned graphics. These could be charts, images, graphs, or photos.
 - If the graphics are self-designed, you do not need to cite them.
 - If you found the graphics on the Internet or used generative AI, make sure you cite the source in your caption.

Grading Rubric

Audience Profile	Possible Points
Specific, targeted, and complete	2
Technical Description	
Content (suitability to audience; completeness)	4
Arrangement (logic)	4
Style and Page Design (visual effectiveness)	4
Two graphics (correctly cited, captioned, and discussed)	4
Mechanics (grammar/spelling)	2
